

## Release notes CONDOR version 44

This version will not read, correctly, earlier projects which have been combined with Talon or with Raptorsupport versions less than 1.10.x.

If old data is to be processed in CONDOR 44 or higher, the data need to be re-combined with Raptorsupport 1.10x or later. Old \*.cor-files must be removed from the data directory prior to this process, only if \*.GPS- and \*.time-files exist. If any of \*.GPS or \*.time files are not present, the \*.cor files should be kept during the re-combination process.

It is recommended that Talon 1.3x or later in combination with Raptorsupport 1.10x or later is used for all new projects.

*Additional notes:*

*Talon 1.3x and later has no function for generating combined files nor does it generate cor-files, this functionality is moved to Raptorsupport.*

*There's a known bug in Condor: If the project is rotated prior to Geotiff export, export will not be correct.*

*3<sup>d</sup>-party software may be dependent on combined files generated by Raptorsuport earlier than version 1.10x*
